

Protective Eyewear Saves Electrical Technician's Eyesight

13 December 2005

SUBJECT: Tremor Series TM110 Safety Glasses from 13 Jun 05 Accident

ATTN: MCR SAFETY

Your Tremor Series TM110 safety glasses are truly an **OUTSTANDING** safety product and a vital piece of anyone's personal protective equipment. As a description of my work, all that needs to be written is that I am an Electrical & Instrumentation Technician with more than 15 years experience.

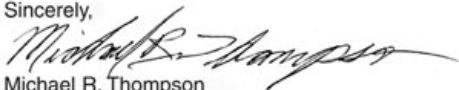

Within this package you will find the Tremor Series TM110 Safety Glasses from my 13 Jun 05 Arc Flash Accident. You will definitely be able to see the intense damage the glasses sustained; however, they did protect my eyes and **SAVED** my vision. The glasses are covered with molten copper and fuse filler.

I know technicians are usually the worst culprits of removing their safety glasses when entering a motor control center or while working in electrical or control panels. They use excuses like they can't see what they're doing because the glasses fog up or sweat has run across the lenses. Well, if my experience could help them to realize the importance of wearing safety glasses no matter what, then I would like to share it.

The Tremor Series Safety Glasses have performed well beyond my expectations and I recommend them to everyone who does electrical or metal work. They are without a doubt a superb pair of safety glasses and I owe them my sight.

Thank you again for the Safety Award and the glasses. More importantly, thank you for your **OUTSTANDING** Tremor Series Safety Glasses.

Sincerely,

Michael R. Thompson
